INOVASIA

DYNAGLASS REINFORCED PLASTIC PTE LTD has been working with INOVASIA Design Pte Ltd since 1996. In the last five years, INOVASIA has designed several products which can only be manufactured by low volume production materials and methods such as those employed in Glass Reinforced Plastic and its associated production processes.

In all the projects we have worked together, Dynaglass has shown its capabilities in keeping tightly close to the design drawings and specifications set by INOVASIA. Dynaglass is many a times 'proactive' in suggesting product detailing solutions without compromising the design intent. Dynaglass's in-depth knowledge of Glass Reinforced and Composite Plastics and the vast experience in fabricating products using the same, allows for successful implementation of our designs.

Some of the major projects INOVASIA has worked with Dynaglass include :

- Command and Control Console Design and Development for Police Coast Guard - through ST Electronics.
- Electronic Borrowing Station and Electronic Anti-theft System for the National Library Board – through ST LogiTrack
- Urine Volumeter for Tan Tock Seng Hospital
- Electronic Train Stop for the North Eastern Line and the Light Rail Transit system for Singapore. For Land Transport Authority of Singapore – through ST Electronics

Personally, I find Dynaglass very friendly, resourceful and professional in all the projects they do. I have no hesitation in recommending Dynaglass to any and all potential customers and partners.

Yours sincerely

Peer M.Sathikh, MDesRCA  
Managing Director
